A concussion is a serious injury, but you can recover fully if your brain is given enough time to rest and recuperate.

Returning to normal activities, including sport participation, is a step-wise process that requires patience, attention, and caution.

**In the Return-to-Sport Strategy:**
- Each stage is at least 24 hours.
- Move on to the next stage when activities are tolerated without new or worsening symptoms.
- According to Hockey Canada’s Concussion Policy, if symptoms return during the return to play process, the player should return to stage 2 and be re-evaluated by a doctor.
- If symptoms return after medical clearance, follow up with a doctor for re-assessment.

**Stage 1: Symptom-limiting activities**
After an initial short period of rest of 24 to 48 hours, light cognitive and physical activity can begin, as long as these do not worsen symptoms. You can start with daily activities like moving around the house, simple chores, and gradually introducing school and work activities at home.

**Stage 2: Light aerobic activity**
Light exercise, such as walking or stationary cycling, for 10 to 15 minutes. The duration and intensity of the aerobic exercise can be gradually increased over time if symptoms do not worsen and no new symptoms appear during the exercise or in the hours that follow. No resistance training or other heavy lifting.

**Stage 3: Individual sport-specific exercise with no contact**
Activities such as running or skating can begin for 20 to 30 minutes. There should be no body contact or other jarring motions, such as high-speed stops. No resistance training.

**Stage 4: Begin training drills with no contact**
Add in more challenging drills, such as shooting and passing drills. There should be no impact activities at this stage. Where possible, give extra space around other players to avoid collisions or falls on the ice. Start to add in progressive resistance training, if appropriate. Coaches can identify players returning to sport after concussion by putting a “No Contact” pinny on them.

**Stage 5: Full contact practice**
You should not proceed to this step until you have received clearance from a doctor.

**Stage 6: Return to Sport**
Full game play.
How long does this process take?
Each stage is a minimum of 24 hours, but could take longer, depending on how activities affect the way you feel. Since each concussion is unique, people will progress at different rates. For most people, symptoms improve within one to four weeks. If you have had a concussion before, you may take longer to heal the next time.

If symptoms are persistent (i.e., last longer than four weeks in youth under 18 years), your doctor should consider referring you to a healthcare professional who is an expert in the management of concussion.

What if my symptoms return or get worse during this process?
If symptoms return, get worse, or new symptoms appear, Hockey Canada’s Concussion Policy recommends you return to stage two and be re-evaluated by a doctor. Continue only with activities that you can tolerate. Remember, symptoms may return later that day or the next, not necessarily during the activity.

If symptoms return after medical clearance (stages 5 and 6), you should be re-assessed by your doctor before resuming activities.

Returning to active play before full recovery from concussion puts you at higher risk of sustaining another concussion, with symptoms that may be more severe and last longer.

How do I find the right doctor?
When dealing with concussions, it is important to see a doctor who is knowledgeable in concussion management. This might include your family doctor or a specialist, such as a sports medicine physician. Your family doctor may be required to submit a referral for you to see a specialist.

Contact the Canadian Academy of Sport and Exercise Medicine (CASEM) to find a sports medicine physician in your area.

Visit www.casem-acmse.org for more information. You can also refer your doctor to parachute.ca/concussion for more information.

Never return to contact practice or gameplay until cleared by a doctor!
